Investigation into LLIN life cycle and usage patterns

Generating insightful data and evidence to make well-informed decisions regarding the most effective strategies for LLIN end-of-life management.

Investigations aimed at providing valuable insights into the dynamics of LLIN utilisation:

- Household-level usage patterns,
- User awareness and understanding of net utilisation,
- Maintenance practices and the duration of net usage.

Underlying reasons behind the discontinuation of LLIN usage

- Uncovering the factors influencing user behaviour and decision-making processes
- Understanding the drivers behind net cessation to develop targeted interventions and strategies aimed at promoting sustained LLIN usage and maximising public health impact

Identifying opportunities for sustainable disposal, recycling, or repurposing

- Exploring the diverse post-usage scenarios for LLINs that have reached the end of their lifecycle for minimising the environmental impact of LLIN waste.
- Examine mechanisms for collecting unused nets, taking into account user perceptions, preferences, and motivations.
- Identifying the most effective collection methods and incentives to inform the development of efficient and community-centric LLIN collection and recycling initiatives.
