upSCALE

“ A digital *Mobile Health* platform to improve the provision of health services at community level”

What is upSCALE?

upSCALE is a Ministry of Health led digital health system strengthening platform for community health workers in Mozambique

It has been implemented with the support of Malaria Consortium and UNICEF since 2016, with financial support from DFID / UK Aid, in 7 provinces (Inhambane, Gaza, Maputo Province, Sofala, Cabo Delgado, Zambézia and Nampula).

The Ministry of Health has incorporated upSCALE into its new national strategy for community health workers (Agente Polivalente Elementary - 'APE') and aims to expand to the entire country by 2024.

MISAU: O nosso maior valor é a vida

upscale Objectives

APE

Improve: the quality of APE case management, health education and patient follow-up using an interactive mobile phone app with a patient-focused decision support tool that covers the entire APE curriculum.

Health center supervisor

Support: Health Facility Supervisors in monitoring APE performance and stock management using an integrated tablet based supervision application.

dhis2

Improve: quality and usage by providing near real-time patient data from the upSCALE app that is sent to the national health system through the DHIS2 (District Health Information System) for monitoring and decision-making at multiple levels.

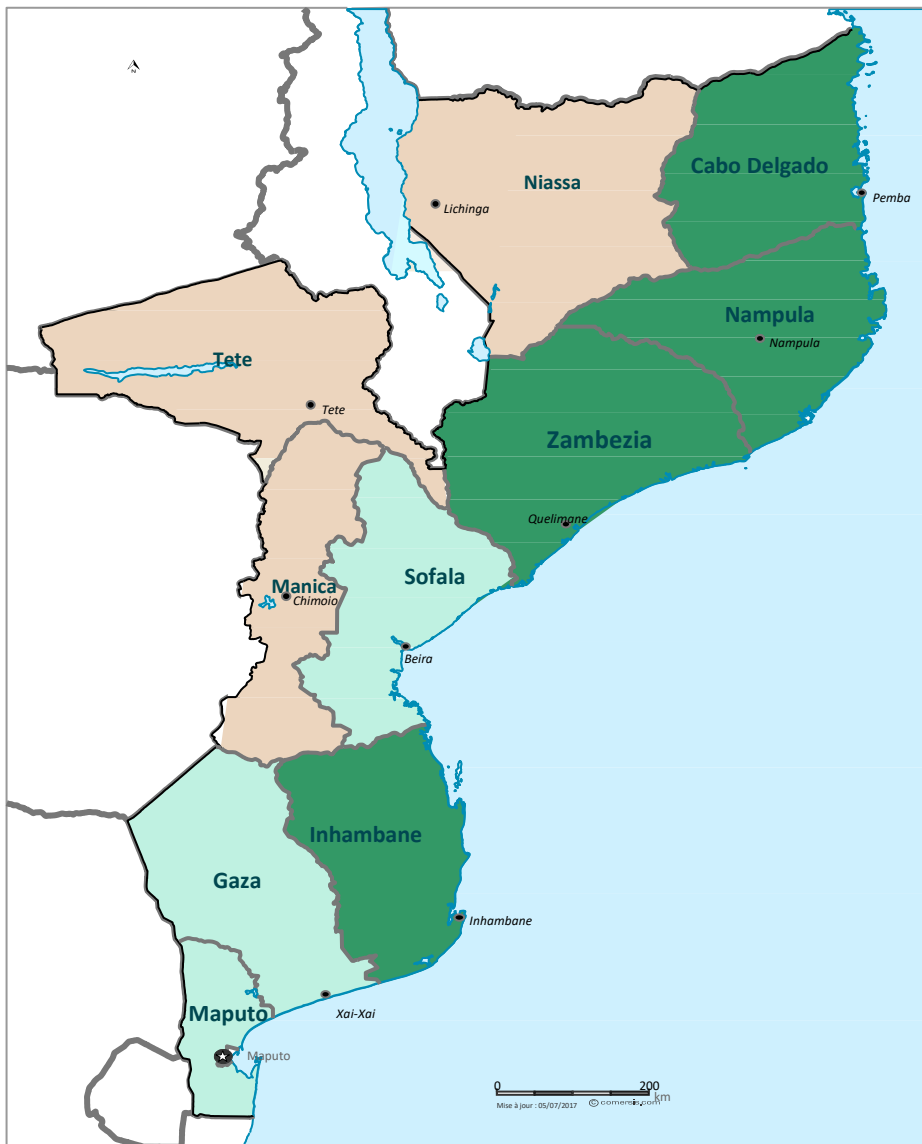

The Ministry of Health has embedded upSCALE into the new national strategy for community health workers (Agente Polivalente Elementare - 'APE') and aims for national expansion by 2022

Coverage Areas

Key:

-  upSCALE implemented
-  upSCALE implementation in progress
-  Expansion planned for 2023

Number of users registered on the platform by province (April 2022):

- ❖ Inhambane - 261 APE/102 Supervisors (363 in total)
- ❖ Zambezia – 607 APE / 161 Supervisors (768 in total)
- ❖ Cabo Delgado - 327 APE / 101 Supervisors (428 total)
- ❖ Maputo – 210 APEs/ 72 Supervisors (282 in total)
- ❖ Nampula – 316 APE / 41 Supervisors (357 in total)
- ❖ Gaza – 125 APEs / 53 Supervisors (178 in total)
- ❖ Sofala – 347 APE/136 Supervisors (592 in total)

Total = **2,968 to date.**

UpScale content

Household Management

User Registration

Postpartum visit

Nutrition & Health Card

Pregnancy visit

Follow up

Stock Management

Births & Deaths

Screening newborn, infant, under 5 and over 5 years

HIV

TB

ECD Module

First Aid module

Patient Services

Patient Registration

Health promotion

Improved supervision reports

Reporting

- Automated APE and supervisor reports emailed to district, provincial and national levels
- Real-time upSCALE data pushed to DHIS2
- Dashboards on DHIS2 on MoH APE monthly indicators

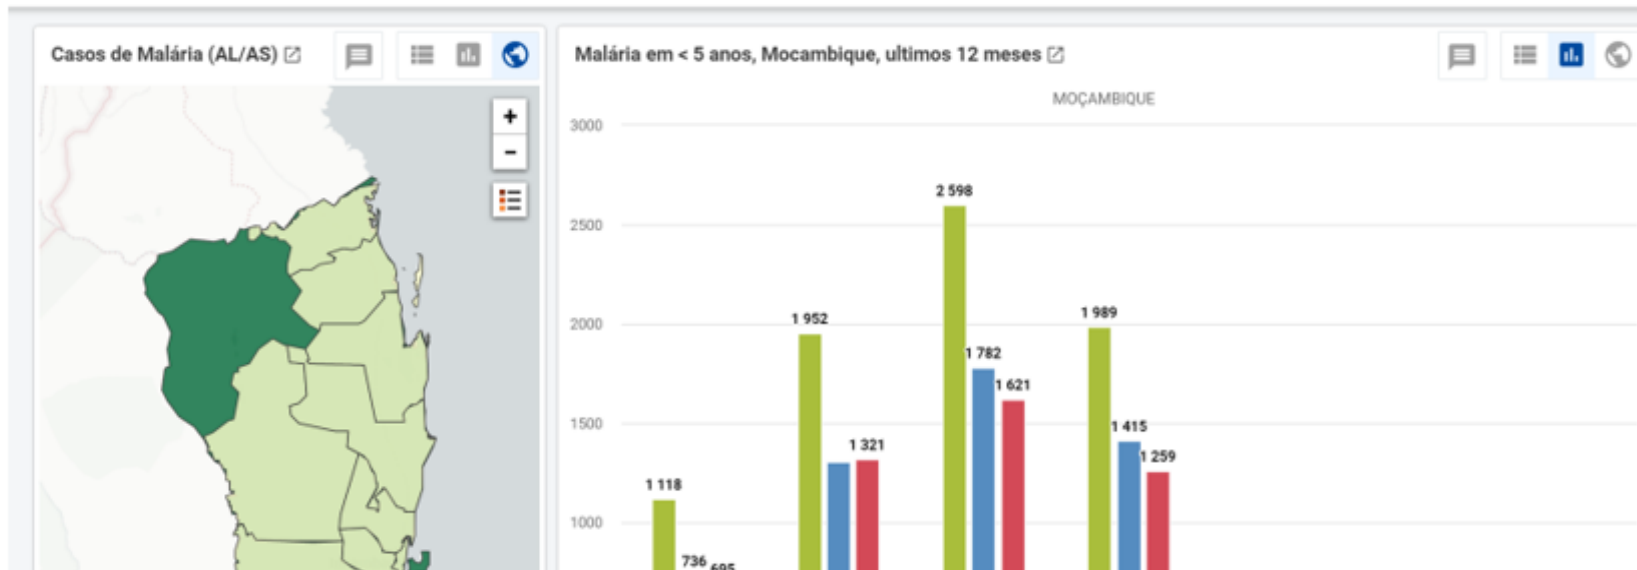

Worker Activity

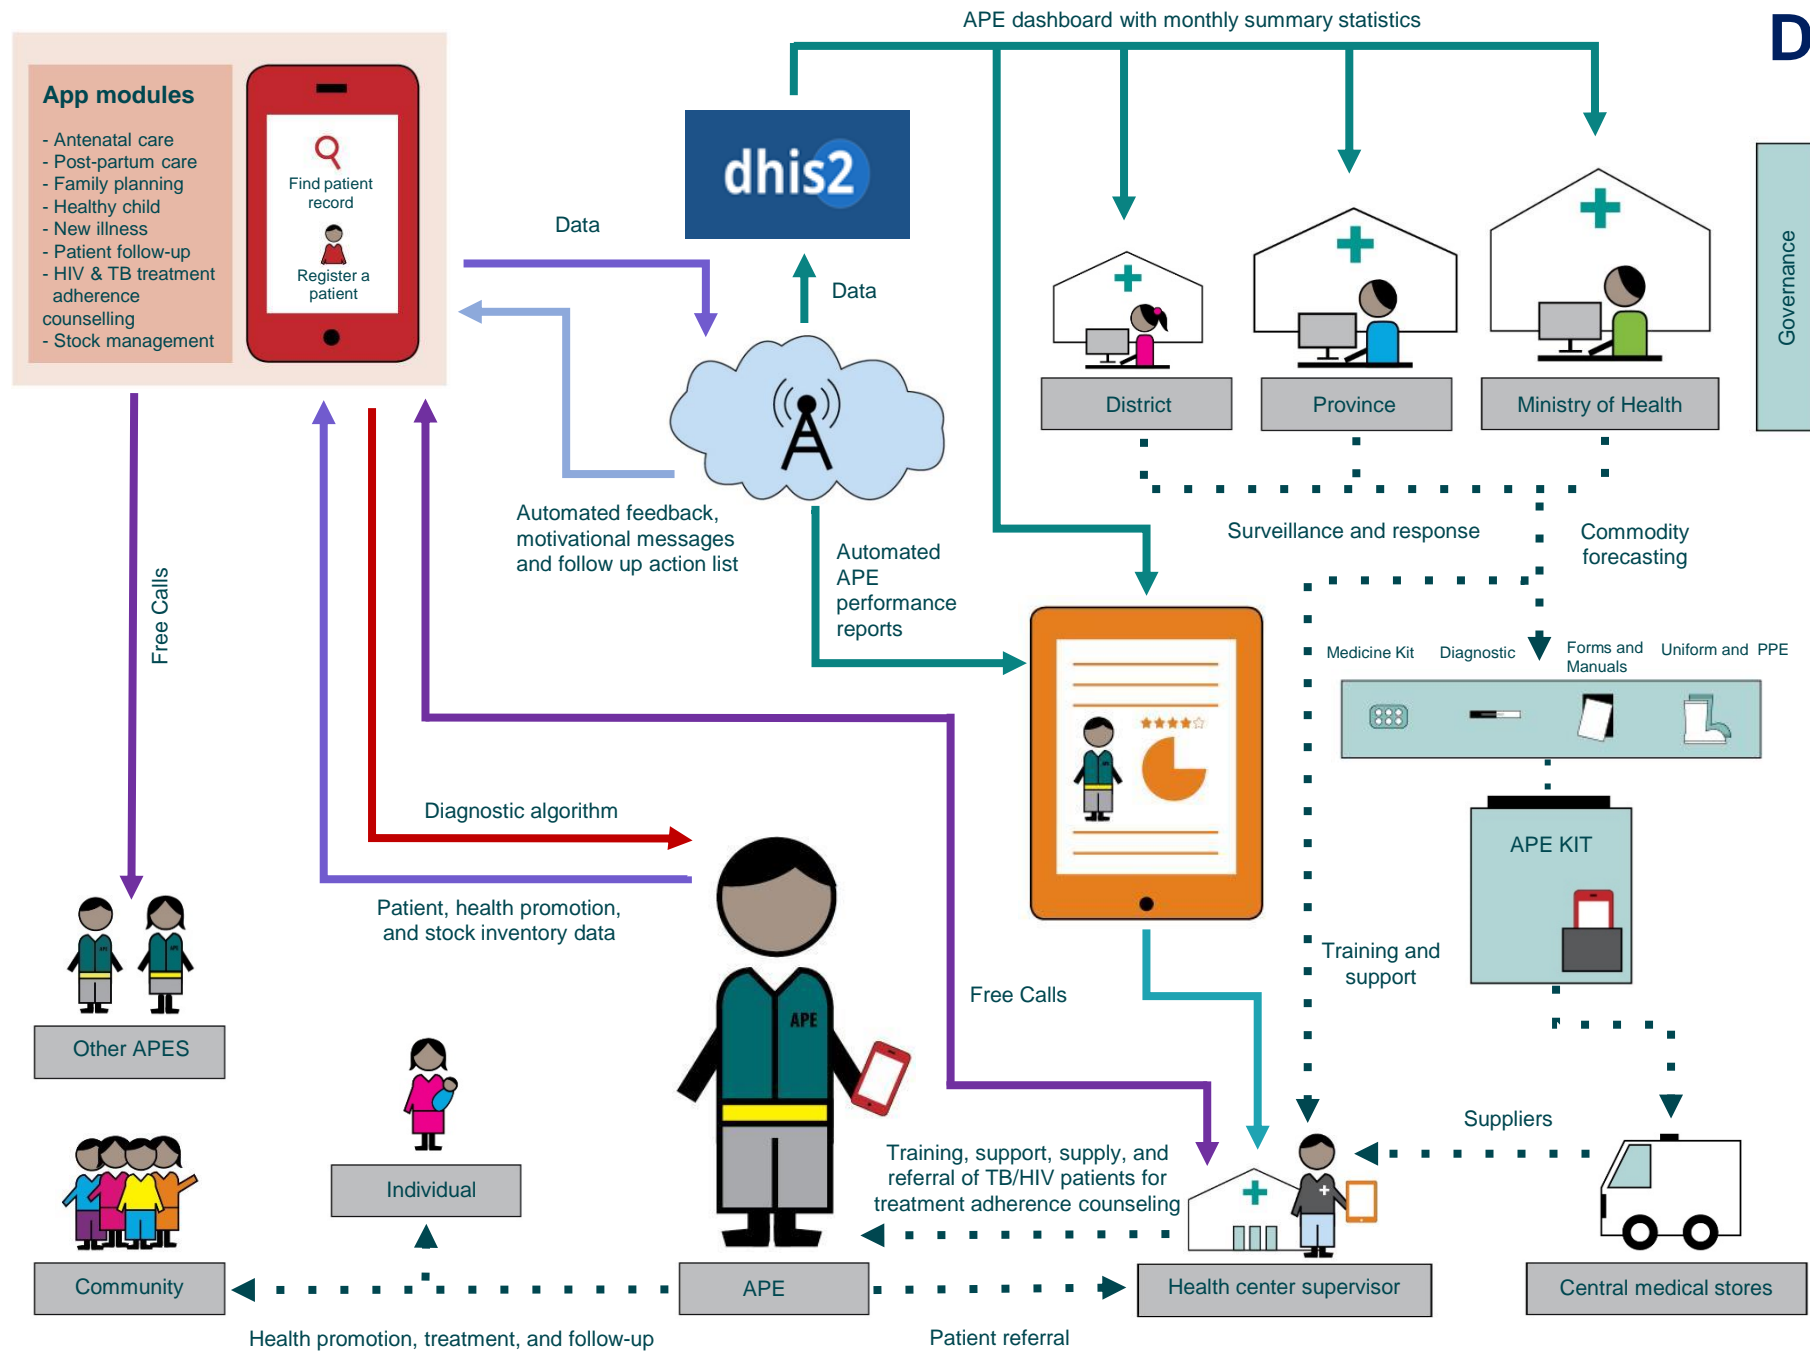

Group	# Forms Submitted	Form Data		Case Data			# To
		Avg # Forms Submitted	# Active Users	# Cases Created	# Cases Closed	# Active Cases	
upSCALE Funhalouro	196	236	9 / 15	59	0	66	5740
upSCALE Vilanculo	435	401	11 / 24	51	2	193	14790
upSCALE Inharrime	419	439	14 / 22	45	1	187	12140
upSCALE Massingao	316	386	14 / 21	30	0	109	13747

Data Flow

Advantages of using upSCALE

- ❖ Bring health services closer to the patient;
- ❖ Reduce clusters of patients in health facilities;
- ❖ Serves as an orientation guide for the APEs
- ❖ Support the APE in the registration of Household, Health promotion, diagnosis and treatment of patients in the community;
- ❖ Reduce errors in diagnosis, treatment (dosing and medication management);
- ❖ Digitization of health services at community level;
- ❖ Ensure the flow of information (data/forms, weekly and monthly reports);
- ❖ Ensure monitoring through calls and messages in the closed user group (APEs, Supervisors and Coordinators);
- ❖ Enable real-time data availability for decision making.

Current challenges

Challenges:

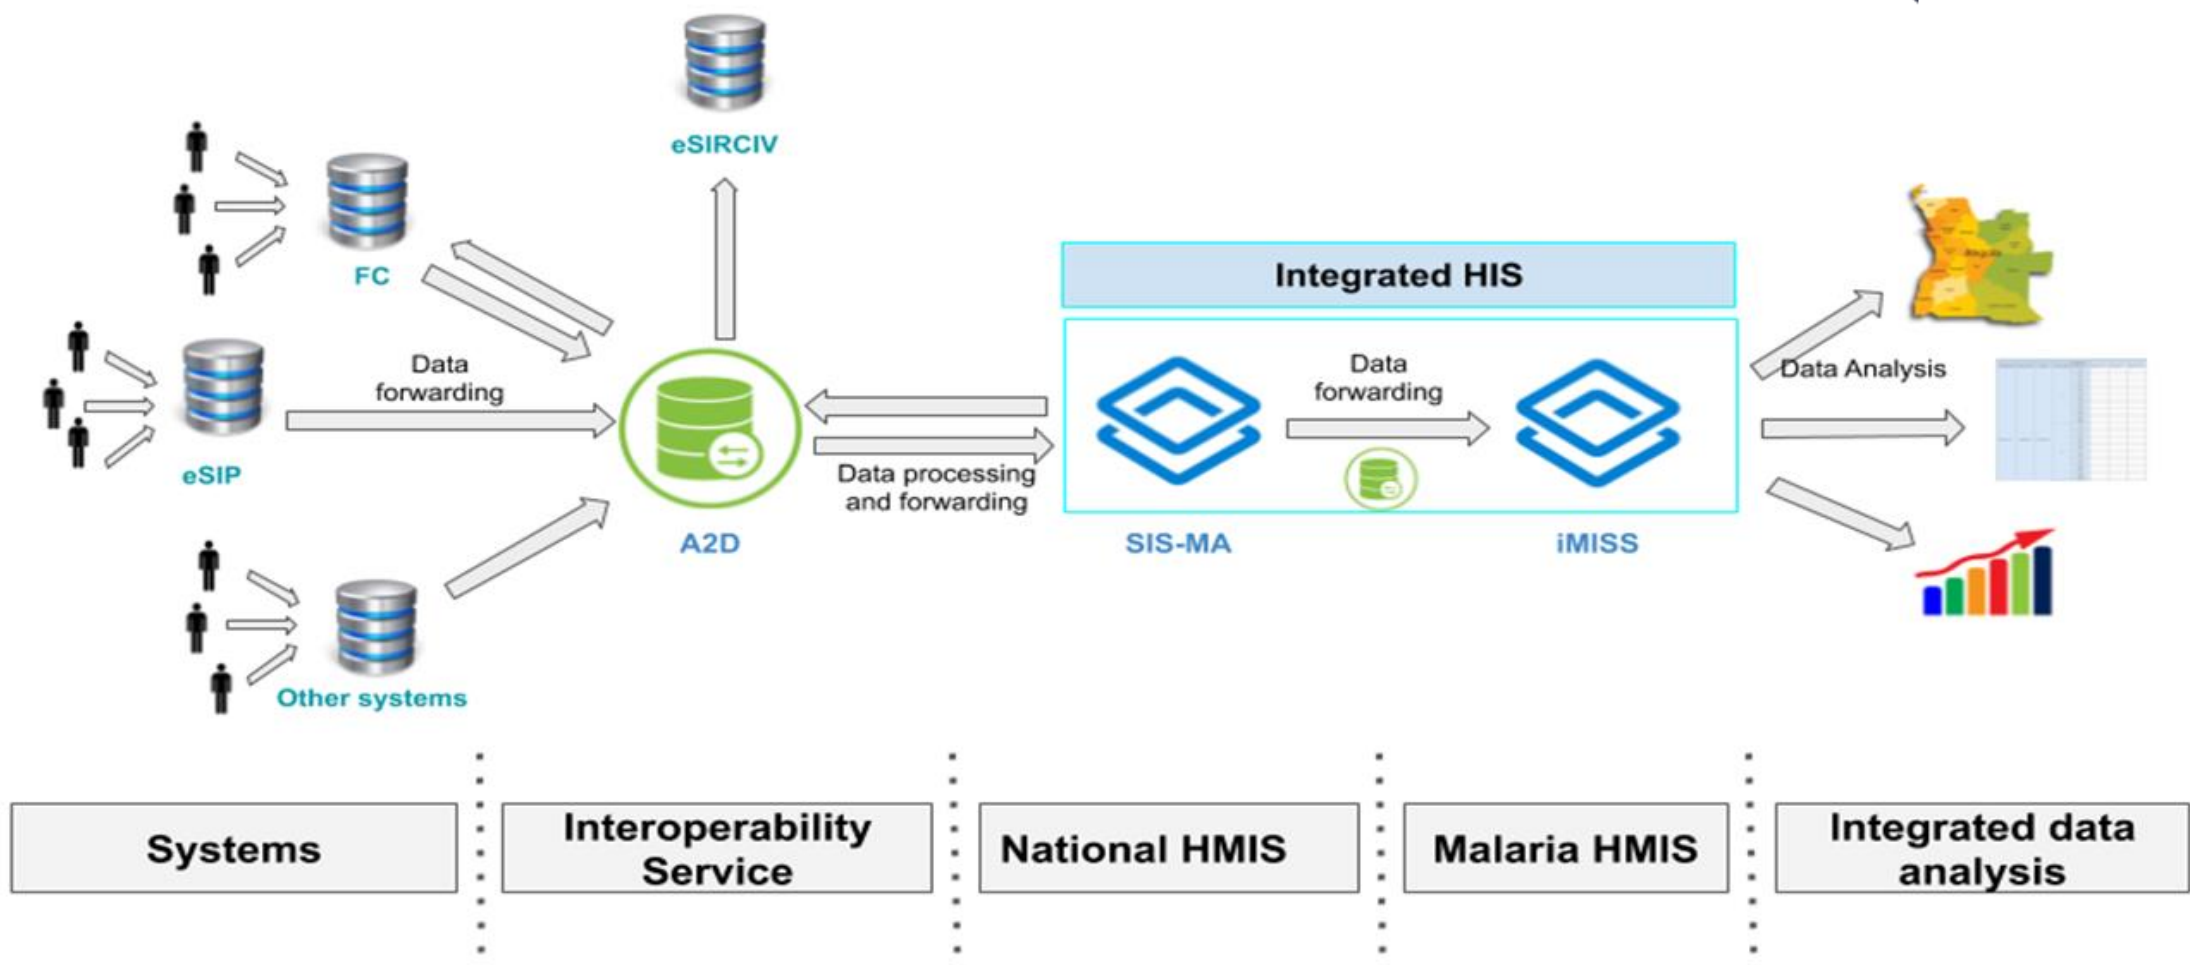

- ❖ Funding gaps and delay impact implementation of field activities and hindering payment of services required to ensure the platform remains operational;
- ❖ Lack of sustained donor funding has a negative impact on allowing activities to continue uninterrupted. Such as the case of 21/22;
- ❖ Obsolete mobile devices and damaged solar panels in locations where upSCALE has been implemented;
- ❖ Lack of grass roots mobile device repair and replacement investment;
- ❖ Challenging partner coordination efforts.

Areas to support with future investments

Sustaining current workforce and scaling to all APEs

CHIS DATA INTERGRATION INTO OTHER SYSTEMS (SISMA/iMiSS)

SUSTAINABILITY OF HOSTING: Moving away from cloud-based DIMAGI hosting to self-hosting

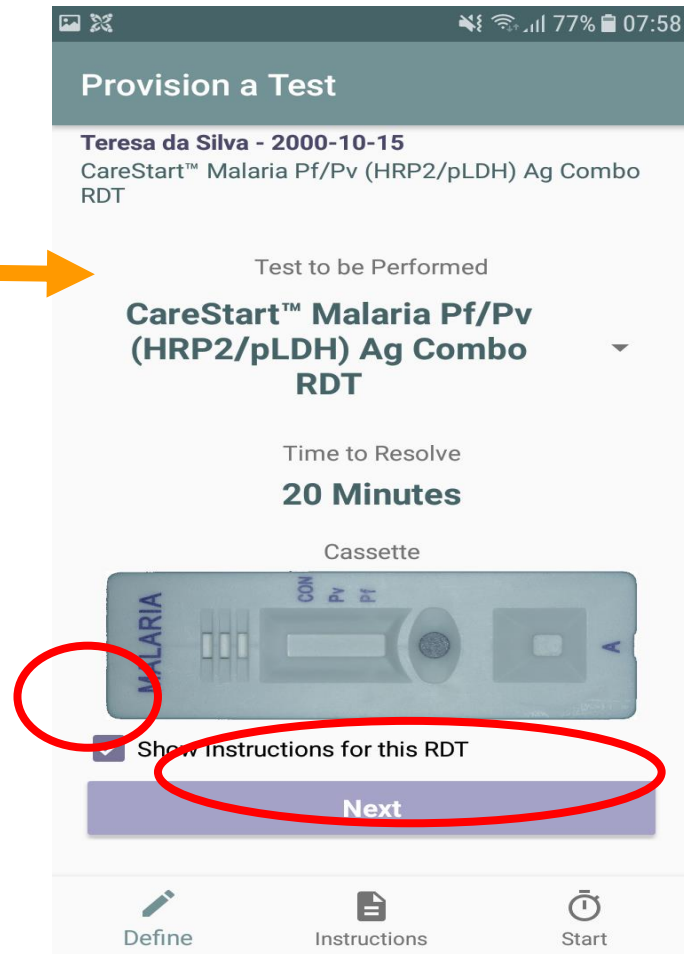

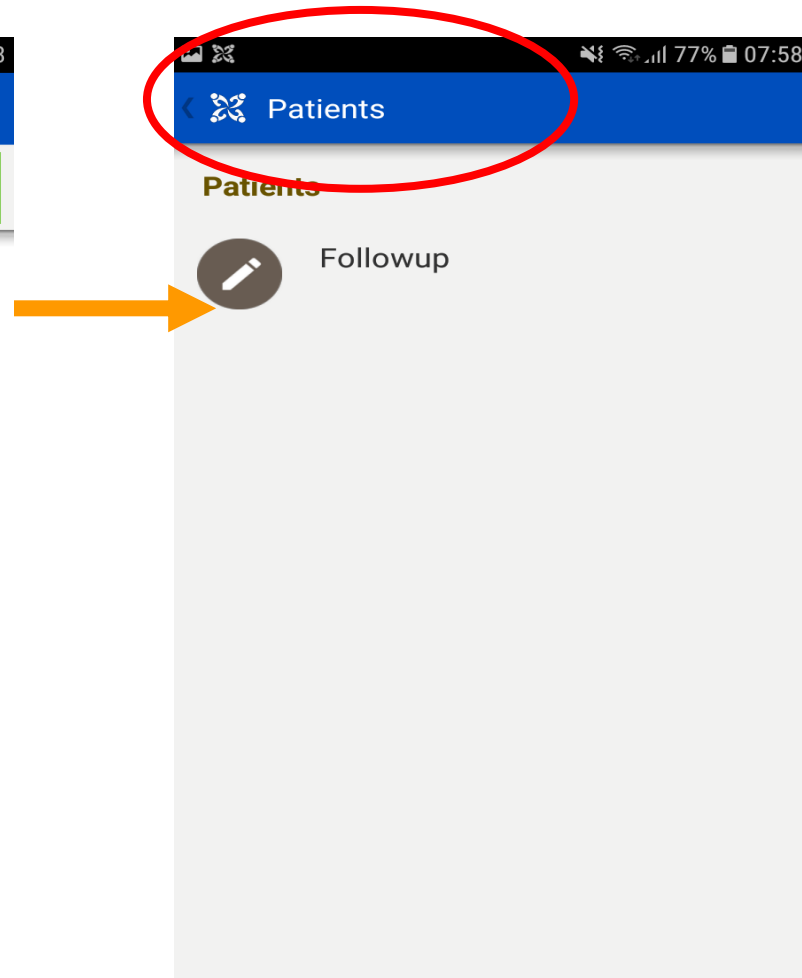

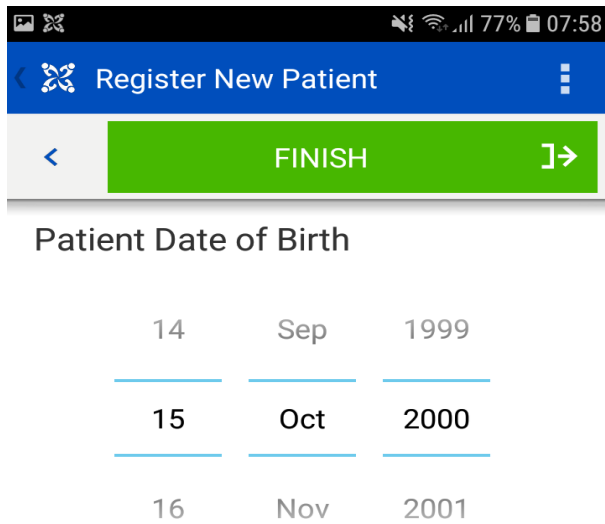

PHASE 1

- Space on APE community server already identified and safeguarded for upSCALE database
- Capacity building of national staff – individuals to be identified
- Infrastructure of server support required for migration and QA
- DIMAGI briefed and have outlined a strategy and prepared to support the process
- DIMAGI TA time would be required during the early stages for migration to ensure capacity, data integrity and DQA.

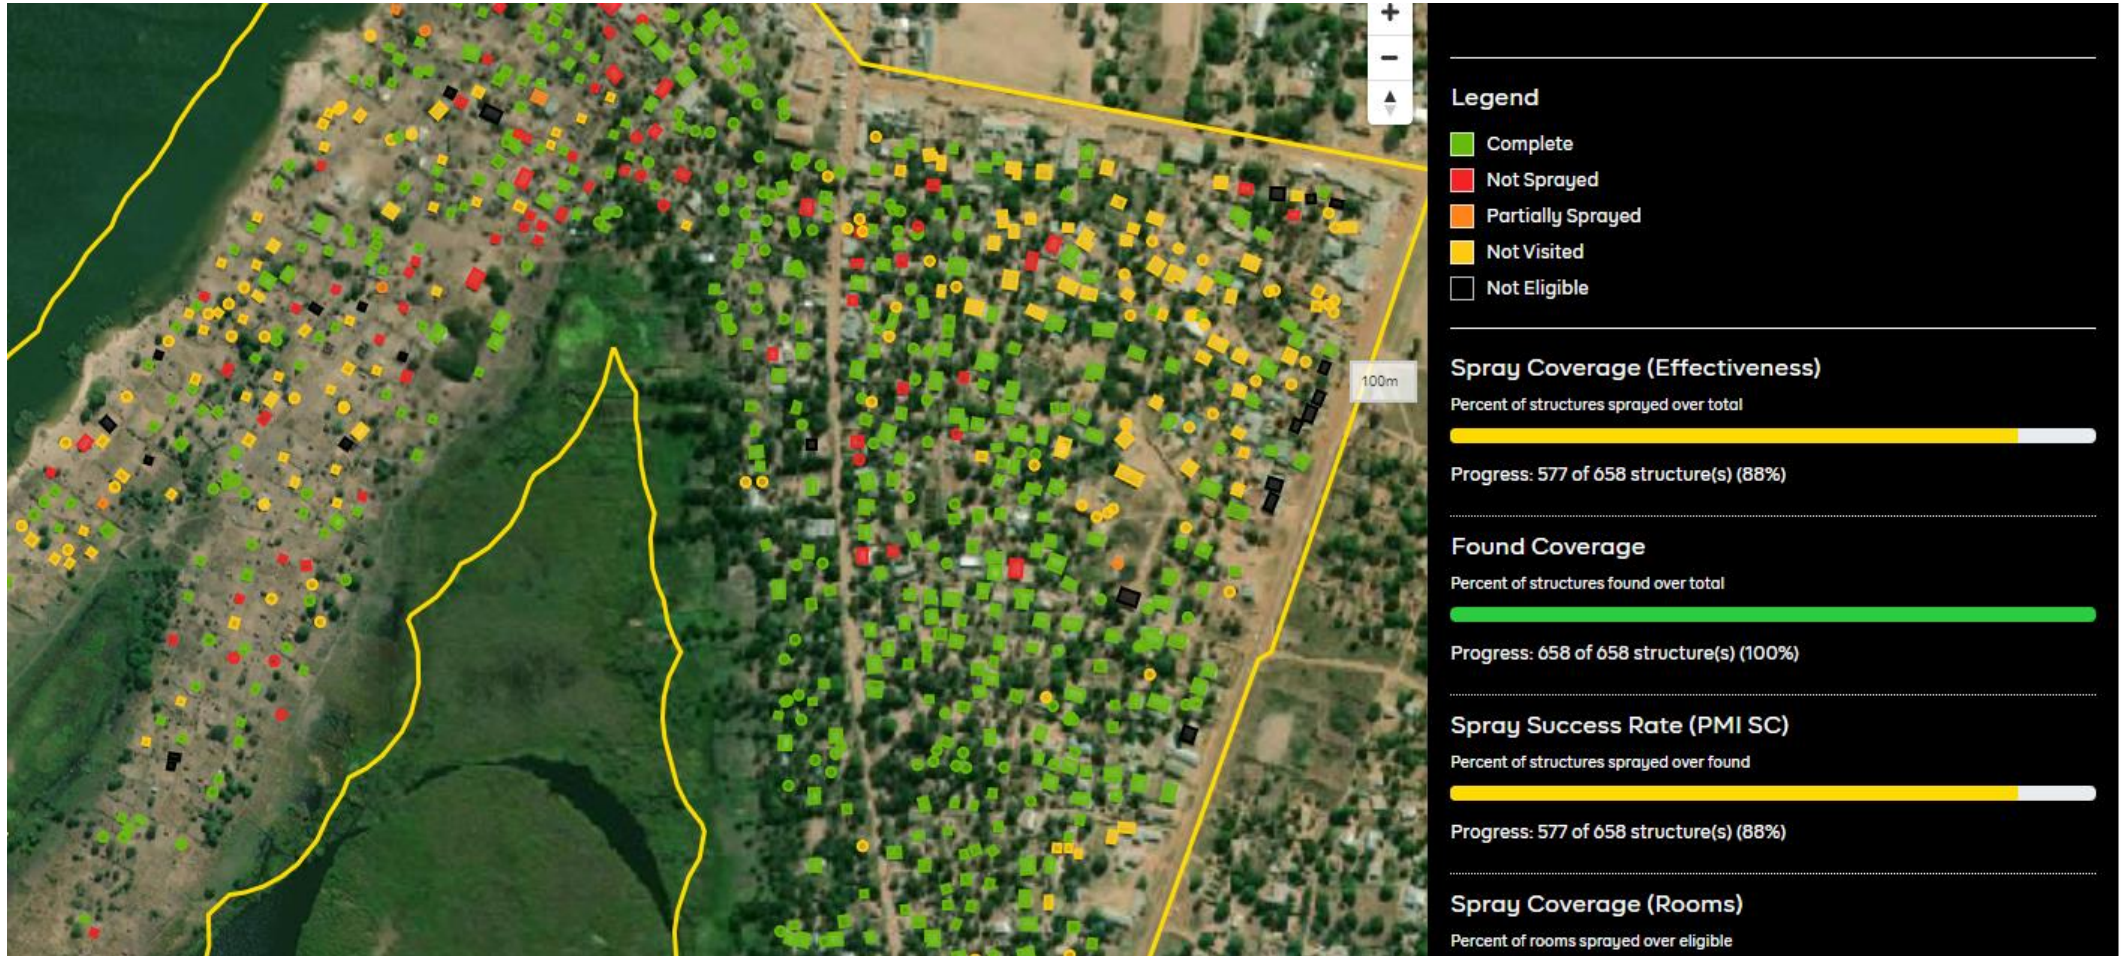

Point of Care Diagnostic tool integration for optimisation

Malaria consortium have been approached by DIMAGI and Audere to test a new mRDT software to integrate into upSCALE that improves quality of RDT testing and improved correct diagnosis to prevent incorrect prescription of antimicrobials.

Integrating upscale data into campaign platforms

BIG DATA VISUALISATION

Final thoughts ...

upscale has the capacity to be one of the most detailed surveillance tools in community case management globally, capturing geo/temporal data at individual level

It could support malaria elimination efforts through being adapted to provide case-base notifications and supporting other systems such as iMiSS

With the right investments (financial and TA), upscale can be sustained and embedded firmly within MOH.

Its existing current scale, eco-system and open source modelling, means it is able to become interoperable and support data flow between routine and campaign systems which can improve health system strengthening and avoid duplication efforts and streamline a single platform solution.
