Malaria in Pregnancy Working Group
Align RBM partners on best practices and lessons learned in MiP programming to help achieve higher coverage in MiP interventions globally.

Promote and support WHO strategy to control MiP:

- Insecticide treated bed net use (ITN)
- Effective case management
- Intermittent preventive treatment (IPTp) in areas of moderate to high malaria transmission
MiP AT A GLANCE

In 2020:

- **34% of** pregnancies in SSA countries were exposed to malaria infection (**11.6 million pregnancies**)
  - **819,000** infants born with low birthweight
  - **164,000** stillbirths in 2019 (20% of stillbirths in SSA)

- **49%** of pregnant women sleeping under an ITN
- **32%** of eligible pregnant women received the recommended 3+ doses of IPTp
- **17%** of women attending ANC1 do not receive any IPTp

ANC and IPTp coverage in sub-Saharan Africa
AREAS OF COLLABORATION

**CM WG**
- Proper diagnosis & treatment of MiP and advocacy for ACTs in 1st trimester

**SMERG**
- M&E of IPTp delivery and ITN use

**MSWG**
- Engagement of ministries of finance and other key stakeholders to advocate for staffing needs and prioritization of SP procurement and investment in MiP interventions, close funding gaps
- Advocacy to ensure pregnant women receive comprehensive, quality ANC services including IPTp and ITNs

**MIP WG**
- MiP SBC to promote demand for IPTp and ITNs, improve ANC attendance (overall and early ANC)

**SBC WG**
- Improving ITN ownership and use among pregnant and reproductive aged women

**VC WG**
- Engagement of ministries of finance and other key stakeholders to advocate for staffing needs and prioritization of SP procurement and investment in MiP interventions, close funding gaps
CALL TO ACTION: Speed Up, Scale Up IPTp!

INVEST IN FUTURE GENERATIONS
PROTECT MOTHERS AND THEIR UNBORN BABIES FROM MALARIA
